

Submitted by B Taylor – June 22, 2020

Bonnie Taylor graduated with a bachelor's degree in Biochemistry from Temple University before the turn of the century. Medical research by day, MBA coursework at night and an old friend's referral led to a position in pharmaceutical management. She went on to serve as a Biotrainer, jointly selected by management and union leadership to deliver competency-based training, successfully creating amity among parties often at odds.

Currently, Bonnie manages a group of technical recruiters who vet scientific engineers for opportunities located in Greater Boston in the aerospace sector. For an employer she has been with for over a decade; in a job that resulted from another old friend's referral. The administrative and executive function of her company has been accomplished from home offices throughout New England for almost 20 years - positioning it as a forward thinking pioneer in work from home culture.

Bonnie has held positions in business operations, project management, human resources, event planning, sales and technical customer service. In settings that include scientific research, pharmaceutical manufacturing, government contracting and educational non-profit entities. She has been a homeowner in Newbury Village since 2003 and enjoys making a home with her husband Bob and their 2 dogs, Ruby and Cooper.

Bonnie considers herself beyond fortunate to work from a home office in Newbury and is eager to see that connectivity extended to all her neighbors frustrated by current broadband availability.
